

COLLEGE CODE:9629

COLLEGE NAME: VINS CHRISTIAN COLLEGE OF ENGINEERING, NAGERCOIL.

DEPARTMENT: COMPUTER SCIENCE AND ENGINEERING.

STUDENT NM-ID: A419477E9F63A5C9C0A48C74C7091E8B

ROLLNO:962923104028 DATE:07/10/2025

Completed the project named as Phase:5 – FE

NAME:User Registration with validation

SUBMITTED BY,

NAME:sivaneshwar

MOBILE NO:9361775883

V Final Demo Walkthrough

♦ Features Demonstrated:

• User Registration Form

- Fields: Name, Email, Password, Confirm Password, etc.
- Real-time validation (email format, password strength, etc.)

Validation Feedback

- Inline error messages
- Button disabled until form is valid

Submission Handling

- Sends user data to backend or mock API
- Success / error message handling

Responsiveness

Works across desktop, tablet, and mobile views

♦ Tools Used:

- Frontend: React (or your framework)
- Form Management: Formik / React Hook Form
- Validation: Yup / Custom validation
- Styling: CSS / Tailwind / Bootstrap
- **Deployment:** Vercel / Netlify / GitHub Pages

Project Report

★ Project Title:

User Registration With Validation - Frontend Module

★ Objective:

To create a responsive and interactive user registration form with built-in validations to ensure high-quality user input before submission.

★ Technologies Used:

- **React.js** (or relevant tech)
- Formik + Yup for form state and validation
- Axios for API interactions
- CSS/SCSS or Tailwind CSS for UI styling
- Vercel / Netlify for deployment

***** Key Features:

- Real-time form validation
- · Password strength checker
- Responsive design
- User-friendly error messages
- Disabled Submit until all fields are valid

Screenshots / API Documentation

◆ UI Screenshots:

Include screenshots of:

- Empty form state
- Validation errors
- Successful submission
- Responsive (mobile) layout

♦ API Documentation (if applicable):

```
POST /api/register
Content-Type: application/json

{
   "name": "John Doe",
   "email": "john@example.com",
   "password": "StrongPass123"
}
```

Responses:

- 200 OK Registration successful
- 400 Bad Request Validation failed

M Challenges & Solutions

=	
Complex validation logic	Used Yup with custom regex patterns for flexibility
UX for inline errors	Implemented dynamic error messages with visual cues
Preventing form spam	Added debounce and disabled submit on pending request
Deployment errors	Fixed environment variables and configured CORS correctly

Solution

□ GitHub README & Setup Guide

```
\# \square User Registration With Validation
```

A modern and responsive registration form built using [React.js].

```
## ★ Features
```

Challenge

- Real-time field validation
- Custom error handling
- Password strength validation
- Clean, mobile-first design

```
## X Tech Stack
```

- React.js
- Formik & Yup
- Tailwind CSS (or your CSS choice)
- Axios (optional)

```
## 2 Live Demo
```

➡ [View Deployed Site] (https://your-live-site.com)

\square Getting Started

```
```bash
git clone https://github.com/your-
username/user-registration-form.git
cd user-registration-form
npm install
npm start
```

# **Screenshots**

### Add screenshots folder or embed them in README

```
Final Submission Checklist

- SitHub Repo with README

- Final Deployed Link (Vercel / Netlify)

- Project Report (PDF / Word / Markdown)

- Demo Recording or Live Presentation Ready

- Screenshots folder in repo

- Setup instructions tested and working

- API (if included) documented

If you'd like, I can help generate:

- A full `README.md`

- A sample `project-report.docx` or `.md`

- Screenshot templates or validation code
```

Just let me know what you need next.
